Centrifuge Juicer

The Omega Model 9000 Centrifuge Juicer is modeled after the Original Omega Model 1000. However, the Model 9000 features a stainless steel top and a 15 Year Warranty, the longest in the Industry. The classic style of the Model 9000 looks attractive in any kitchen. If you're looking for a reliable juicer that is extremely efficient, easy to clean, and will provide you with a lifetime of juicing – the Omega Model 9000 is the one to choose. When you purchase a Model 9000, you will have purchased "the last juicer you will ever need to own!"

- **High Yield** – The Omega 9000 Centrifugal Juicer extracts at least 20% to 30% more juice than most pulp ejectors. "It is the most efficient juicer available."
- **Exclusive Household and Commercial UL Approval** – Unlike other juicers on today's market that are approved by UL for Household Use Only, the Model 9000 is UL listed for Household and Commercial Use.
- **Warranty** – The Omega Model 9000 carries a 15 Year Warranty – the longest in the Industry.
- **Motor** – The powerful 1/3rd horsepower commercial induction motor is the quietest for this style juicer. This brushless motor has very few moving parts resulting in less wear and greater dependability.
- **Surgical Stainless Steel** – The metal parts are forged from heavy gauge surgical stainless steel ensuring years of dependable, worry-free operation. All stainless steel parts are polished or sandblasted to make the unit not only pleasing to look at but easy to clean. With the Model 9000, your juice will only contact stainless steel.
- **Blade** – The stainless steel blade efficiently shreds up fruits and vegetables. Its heavy weight speaks for its durability. The blade is designed to "float" or "change positions" providing for even distribution of the pulp. This ensures smooth performance while juicing.
- **Basket and Bowl** – Each stainless steel basket is

hand balanced to achieve minimal vibration during juicing. The large stainless steel bowl is polished to a mirror finish on the outside. Both the basket and bowl have a sandblasted finish on the inside. Once again, making for very easy clean up.

- **Spring Clutch** – The little white knob that holds the blade and basket in place is called the spring clutch. This clutch nut allows the blade to "float" and distribute pulp evenly for smooth performance.
- **Rubber Feet** – The Model 9000 stands on a dozen evenly spaced rubber feet. These feet vary in height. This helps to prevent the juicer from "walking" across your kitchen counter.
- **Latch Arms** – Our cantilever style latch arms were a first in the Industry. Whether you're a strong athlete or if you suffer from arthritis, these latch arms make for easy assembly and disassembly.
- **Optional Accessories**

Filters – Optional non-bleached cellulose fiber filters line the strainer basket. After juicing simply remove the filter and the attached pulp from the strainer basket for a quick and sanitary clean up.

Citrus Attachment – The optional attachment instantly converts your Model 9000 into a professional citrus juicer. This attachment automatically gears your juicer from 3600 RPMs to 250 RPMs, providing all the power necessary to squeeze every drop of juice from your citrus fruit. It is super efficient, simple to assemble and disassemble.
